### **REASONS FOR ALLOWANCE:**

The following is an examiner's statement of reasons for allowance:

The prior art combination does not disclose or suggest the process of preparing or recovering a titanium halide from a waste solution containing titanium alkoxide wherein the titanium alkoxide is converted to a titanium halide using a halogenating agent, with or without distillation, as claimed.

In Potter et al (5,242,549), the titanium trichlorobutoxide (titanium alkoxide) undergoes disproportionation to produce titanium dichlorodibutoxide and titanium tetrachloride (titanium halide) without a halogenating agent. Analogous process occurs during the separation by distillation process in Kilty et al (5,948,212). Thus, in Potter and Kilty's processes, the conversions occur without a halogenating agent(s). Neither Band (4,472,521) nor Nozaki (4,497,905) suggests modifying Potter or Kilty's process to convert titanium alkoxide to titanium halide. Band produces a magnesium halide or manganese halide and Nozaki produces an improved olefin polymerization catalyst.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
